

ENABLING INNOVATION

Innovation is successful change
Projects are how we deliver it

What should I bring to class?

A laptop – once enrolled, you will be able to download the digital resources that support the day's learning; alternately, you can download and print the paper versions if you are more comfortable working with the old-school tools of the trade.

If you'd like to bring a keep-cup and/or refillable bottle, we provide all-day tea, coffee and water; and if you don't want to bring your own lunch, there are plenty of nearby food options.

STEERING NOT ROWING

Whether a project is large or small, innovative or similar to other projects, governance and administrative support will be needed.

The type of governance and level of support will vary considerably between projects of different types and complexity.

This Masterclass introduces a logical, robust and repeatable framework for effective governance, defining metrics for its success.

We look at the tasks, support and decisions that a project manager might need and how to inspire optimal relationships between project managers, stakeholders and your organisation.

Why should I take this Masterclass?

What will I learn in one day?

We get that adults have distinctly different motivations to learn, so we ensure our content is relevant, learners are engaged, learning processes are active and delivery is centred around **you**.

Participants are therefore encouraged to share complex, 'real life' examples from their professional experience that relate to the challenges presented at each stage of the governance lifecycle.

Fast paced, dynamic and practical, this highly interactive Masterclass is a must-attend for current and aspiring project sponsors, program and portfolio leaders.

Who will be teaching me?

Our Certified Project Trainers are:

proven industry expert with over 10 years' practical experience leading complex projects, programs and portfolios of work
inspiring communicators
creative and critical thinkers, and
trained educators, facilitators and mentors.

Importantly, they are not professional lecturers who only learned project management from text-books – they superimpose on the content a wealth of project skill and experience from all stakeholder perspectives that bring project management to life.
